

## DECONTAMINATION SERVICES

A highly effective workplace disinfection system

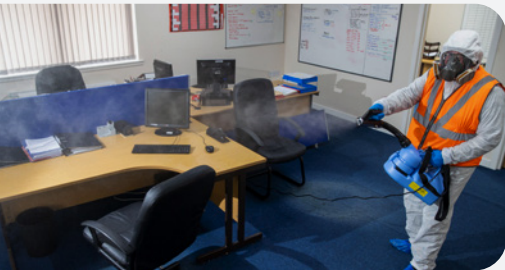

Trusted to serve Glasgow for more than 30 years

# We're ready to support you today!

We have a long and proud track-record for delivering value-adding and safe systems – using new and innovative techniques and tailoring our services to support our customers.

Based in Glasgow, we are working with private, public and voluntary sector organisations across Scotland and throughout the UK to make buildings and facilities work ready by using an advanced disinfection system.

These precautionary measures are designed to reduce the risk and spread of infection or illness by treating all reachable surfaces within all workplaces.

Our highly trained team is fully equipped and ready to undertake an effective disinfection service within your premises.

Disinfection	Differentiation	Consideration	Protection
We use safe chemical fogging methods and disinfectant wipes to kill germs and reduce the risk of infection.	We are a highly trained and customer focused team using tried and tested decontamination methods.	Rooms are ready to re-enter within a short period from treatment. We are more than happy to visit your premises out of hours.	Our solution is very effective and lasts until a new virus source is brought into the room.

Please contact us today for a free, no obligation quotation. Our team is ready to undertake a risk assessment at your premises at a time of your convenience.
